

Hue - cable management guide

A

A Cable Clip can be used in multiple locations underneath the Hue seating element to guide cables to either of the 2 rear legs. (Provided with Hue Leg Cable Caps)

B

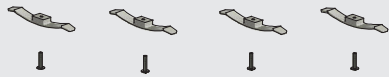

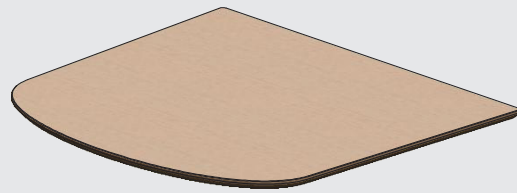

A Hue Cable Leg Cap can be used on either of the outer 2 rear legs to direct cables to the floor. Please note that the correct Hue Leg Cap height is used

Denotes a primary cable exit location.

Hue with screen uses the same cable management route as shown in diagram.

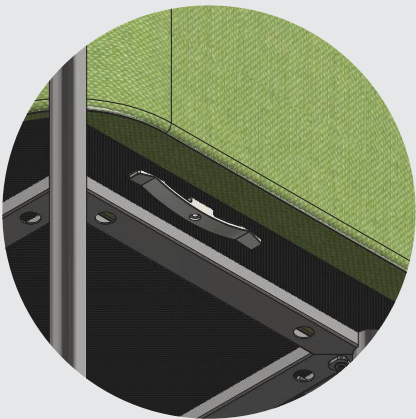

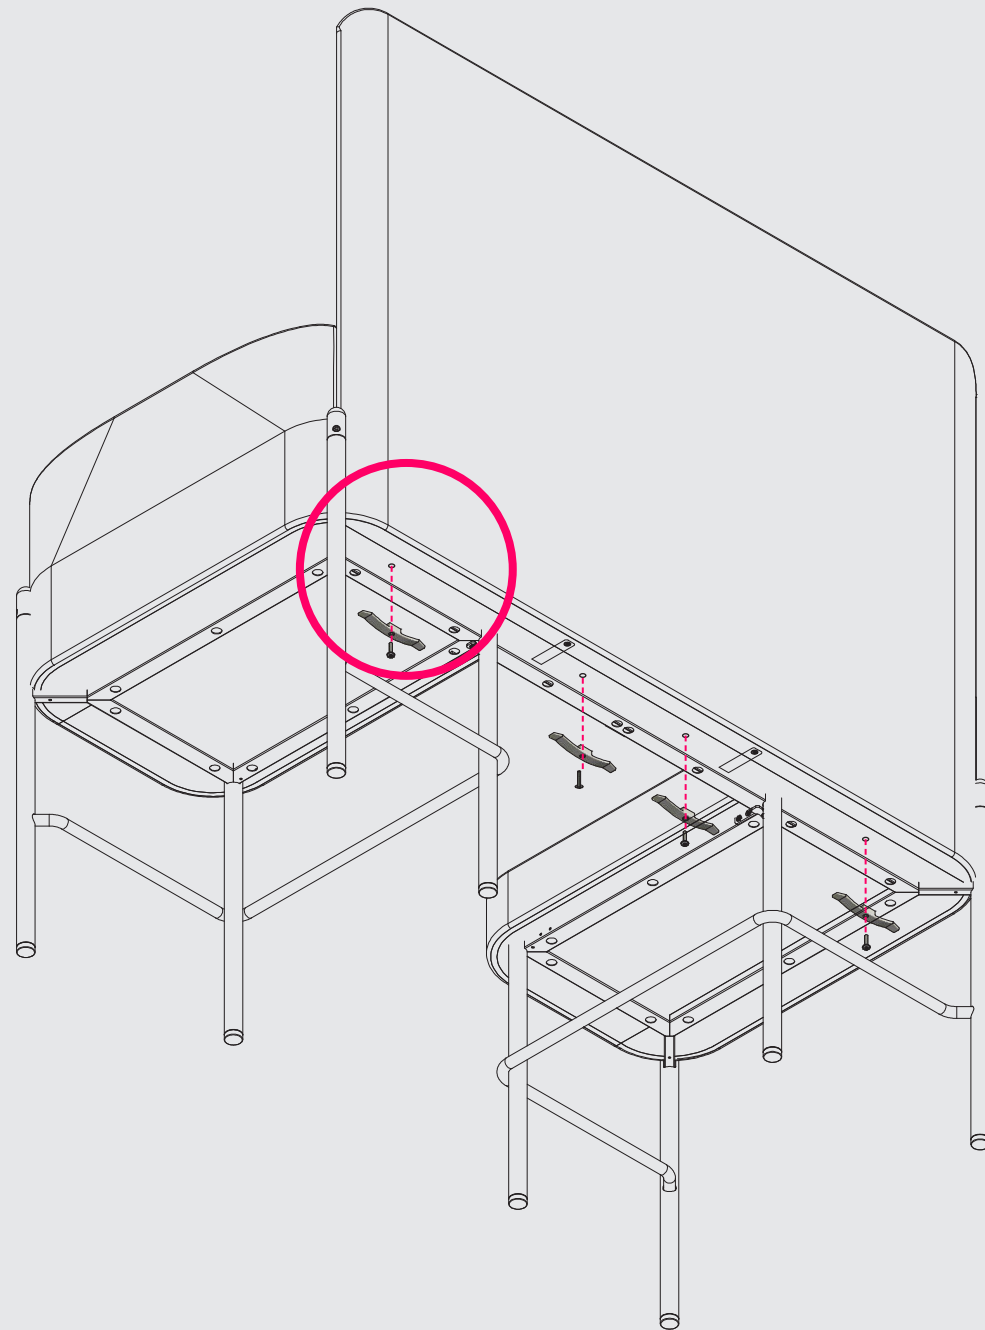

Step 1

The required components for providing Hue with power and cable management. Power unit to specified separately.

Cable clips and fixings are provided when specified with Hue leg cable cap.

Note: For fitting power unit to table top, please see power unit manufacturers fitting instructions.

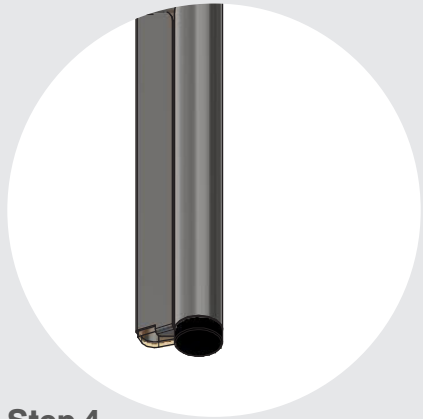

Step 2

Fix the cable clips into locations shown.
Align cable clips parallel to metal frame.

**Step 3**

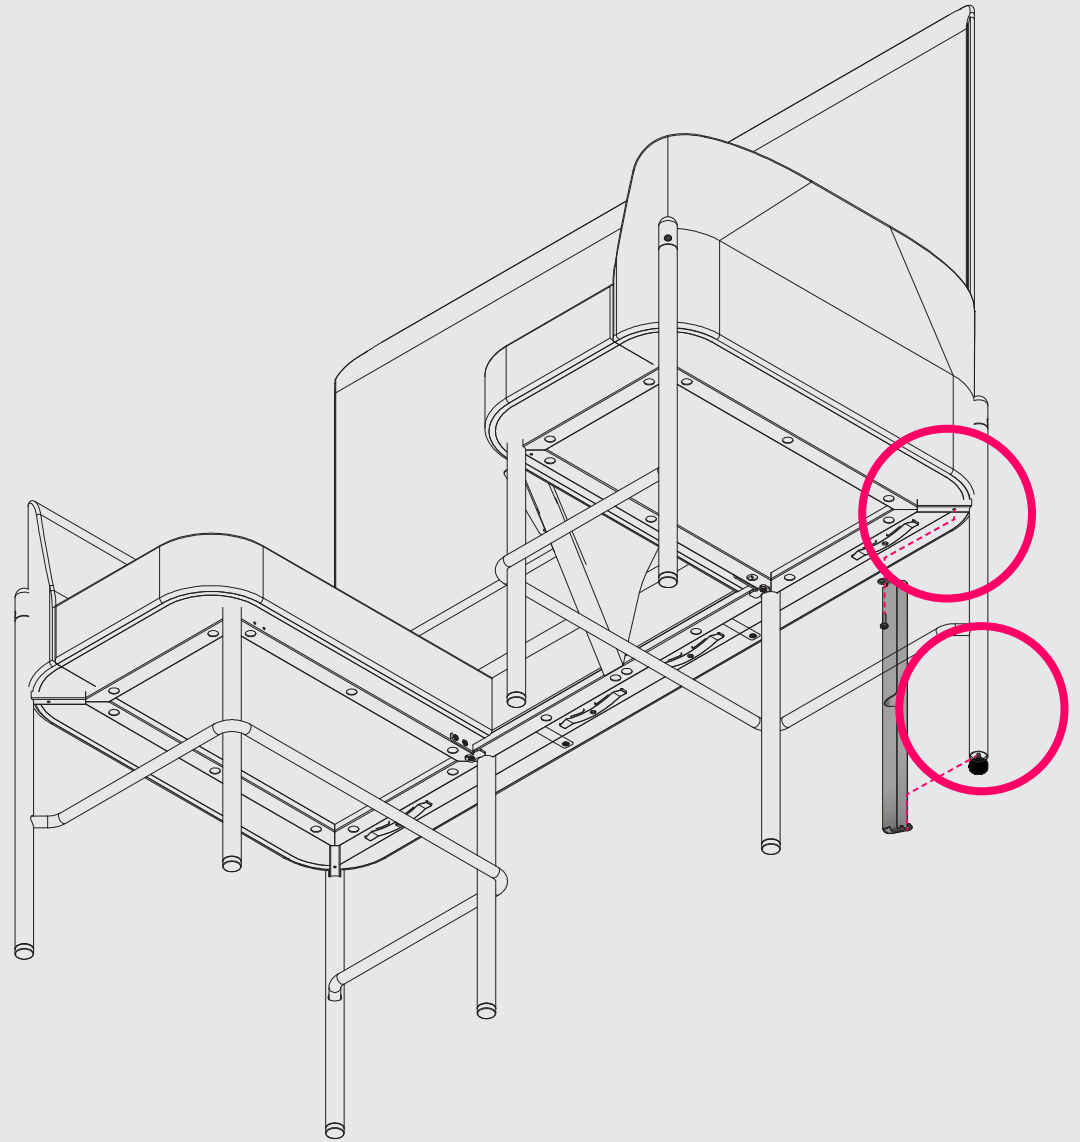

Secure Cable Leg Cap into place in location shown. Do not over tighten as the cap needs to move freely.

Note: The Cable leg cap can be located at either of the outer rear legs, depending on the required socket location.

**Step 4**

Loosen the adjustable foot and slot Cable Leg Cap over thread.

Note: Fixings should be secure but not overtightened so the Cable Leg Cap can be opened.

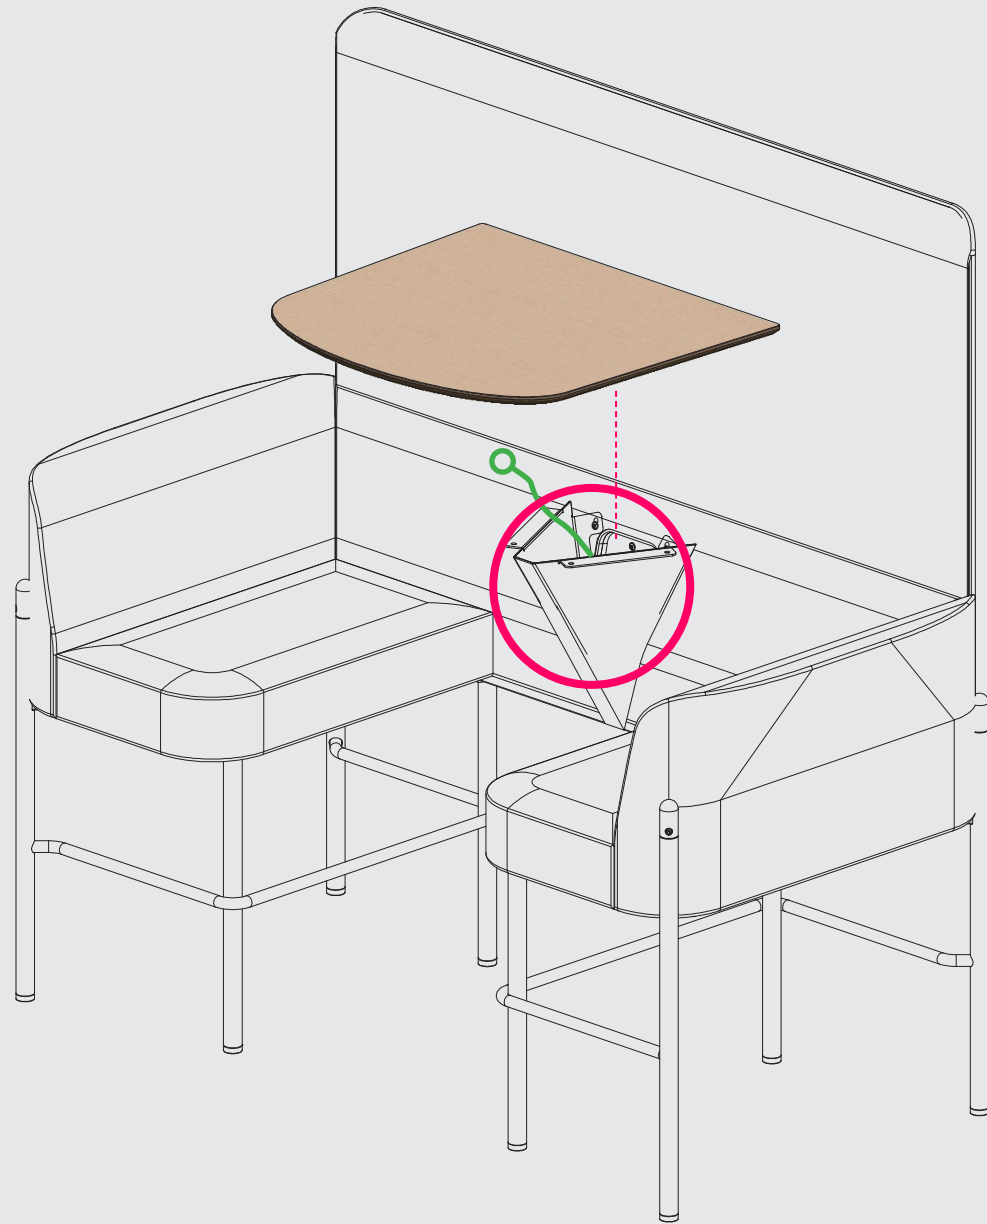

Step 5

Fix the power unit to table top as per the power unit manufacture's instructions.

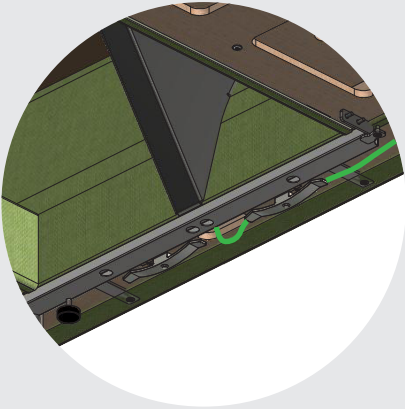

Step 6

To secure the cable, loop it round the cable clip within the table bracket once. Now feed the rest of the cable through the hole in the plywood frame so it comes through the bottom of the unit.

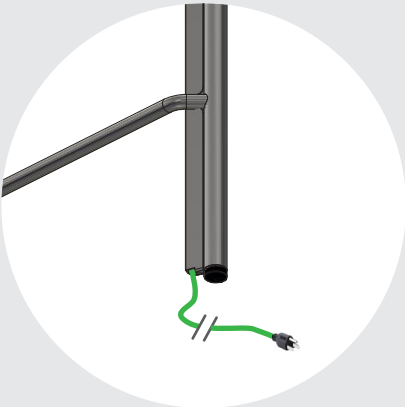

— Cable
○ Power Unit

**Step 7**

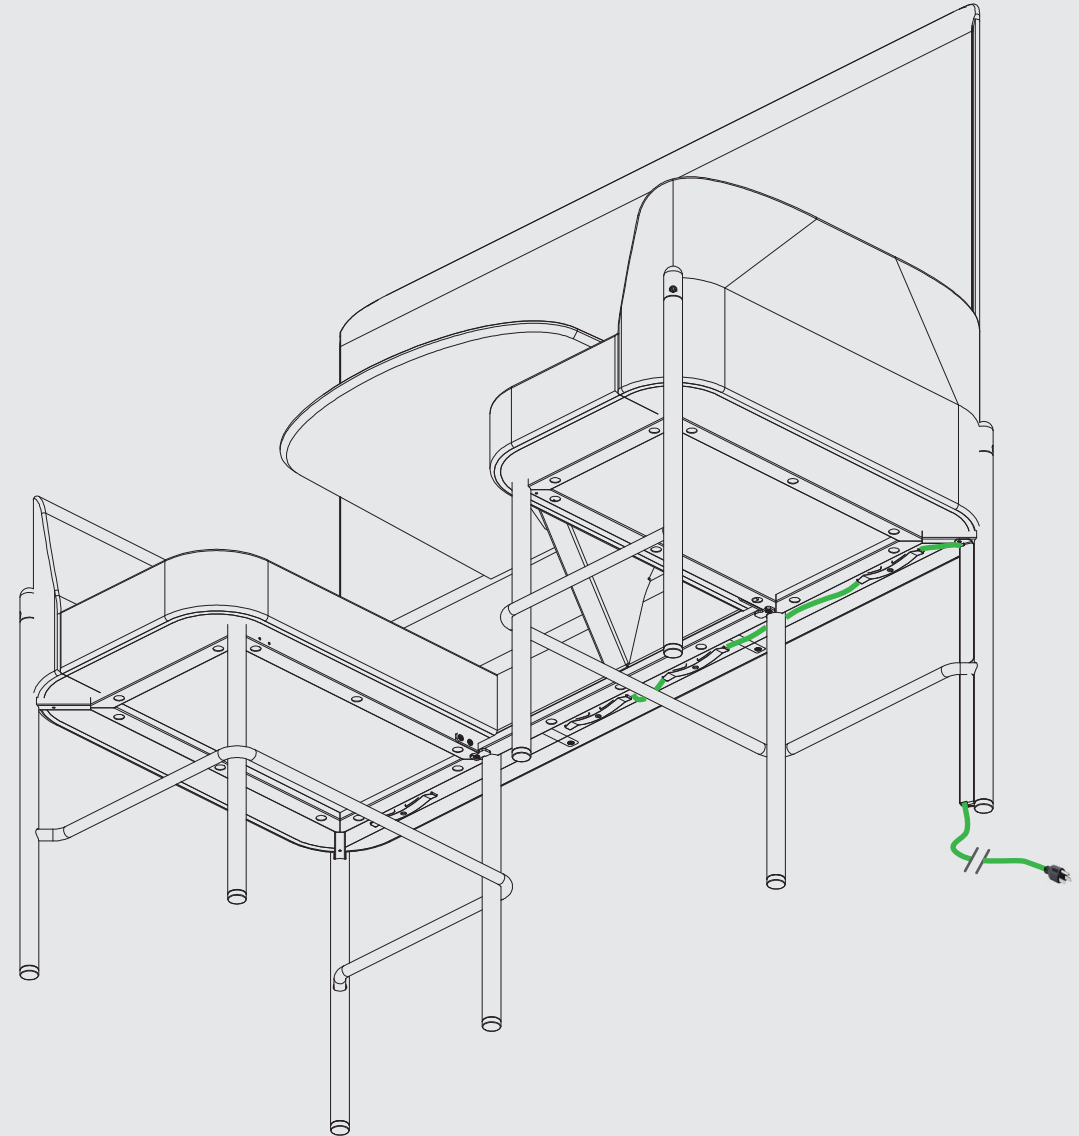

After fixing the table top in place (see Hue Assembly Instructions), pull the cable through the hole in the bottom of the plywood frame. Guide the cable through the exterior cable clips towards the cable leg cap.

**Step 8**

Feed cable through cable leg cap.

**Step 9**

Once cable is in place, close the leg cap and tighten both the upper fixing and adjustable foot to secure the cable leg cap. Now plug the cable into an appropriate socket.
